

## Eurofins Announces Overnight TAT – Delivered by 9:00am

Samples at Laboratory before 4:00pm

→ ANALYSIS OVERNIGHT →

NATA Report Released 9:00am

Today's Australian environmental laboratory industry is characterised by the internal service triangle being quality, turnaround time and price! These metrics are often strongly debated or manipulated in each direction in order to maximise the benefits to the end users but in reality they have remained the same for the last few years.

Eurofins | mgt's Australian operations are about to break this paradigm with 9:00am next day delivery.

Traditionally, turnaround times have been based around delivery on 24 hours, 48 hours, 72 hours and the standard turnaround time of 5 working days. Premiums are allocated for shorter turnaround times and this will also apply for 9:00am delivery.

### How will this work?

Samples received with a valid order or completed chain-of-custody requesting "Overnight TAT" on Day 0 before 4:00pm will have results reported the next day before 9:00am.

**Analysis: Metals, PAHs, TRH & BTEX analysis  
Available from our Sydney & Melbourne  
Laboratories**

A surcharge of 100% will apply for Overnight TAT.

Our Managing Director Sefton McGraw said

*"We are very excited about this new venture. Again we have listened to our customers views in a recent client survey that highlighted this requirement. We have been testing this internally and we are now in a position to deliver this service. I am looking forward to seeing the daily figures and reporting our success to the marketplace."*
